

# WSP systems modelling learning network subscriptions

---

## Basic membership

Fee: **Free**

This level of membership will continue to operate in a similar way to the already existing membership service provided to most members (apart from organizational partners) so far. Most members, who have already signed up will be by default registered as basic members. Basic members are not required to pay a subscription fee and will enjoy the following benefits and services:

- Access to the most recent electronic newsletter with updates about the network environment;
- Access to the latest online tutorial;
- Communications from the network manager. We will keep you informed with regular updates about the network activity, but you can also contact us with your queries;
- Information about training courses;
- Information about iThink and Netsim software license. Did you know that we can assist you if you require iThink/STELLA software and license? Just drop us a line and we can explain more about the benefits that you can gain from purchasing your license from us;
- Access to a number of online models;
- See members' comments and questions about these models.

## Individual WSP membership

Fee: **£95**

This level of membership provides members full rights to use the Online Systems Learning Network website for their systems modelling activity. Whether you are a beginner in systems modelling or a more advanced modeller you will have access to help, information and networking opportunities to support your modelling activity. For an annual subscription fee of £95, you will receive a host of benefits and services:

In addition to the basic elements above:

- Direct contact with a Network Manager, to answer or direct you to the best place to receive answers to your systems modelling questions;
- Access to back-issues of the newsletter;
- Advance notification about new models uploaded on the website, new tutorials, WSP projects, etc.;
- Full access to a wider range of online models on the network website;
- Full access to the whole series of online tutorials and training models;
- Share your own (online and iThink/STELLA) models, add questions and receive feedback from the WSP team and other members in the network;
- “Tailored services” – members can communicate with the Network Manager to:
  - request advice and specific information for a specific aspect of modeling;

- suggest training topics to be added to the network space;
- get in touch with other modellers in your area.

*Did you know that if you attended a Whole Systems Partnership training course or you have received in-house training from the WSP team, you will automatically receive a 1 year free individual membership to the network?*

*In addition, iThink\STELLA license holders who opt to renew their subsequent license agreement with WSP are entitled to technical support from the WSP team, which includes also access to the network as an individual member which therefore provides a seamless, one-stop-shop for your modeling needs.*

## **Organisational partner membership**

**Fee: Included in WSP Partnership License agreement**

This membership is appropriate where an organization is willing to develop its in-house modeling capabilities and therefore requires multiple licenses and an approach to developing and sustaining this in-house capacity. WSP have negotiated a unique licensing arrangement with Isee Systems which makes multiple licenses considerably cheaper when more than two licenses are required. In addition, WSP seek to ‘partner’ with the organization in providing bespoke training and support to in-house capacity development as well as specific projects.

This is an organisational partnership arrangement for WSP clients in the public sector within the UK. WSP builds a special relationship with these members by providing priority coaching and in-house training, software licenses and technical support, support in modelling projects and workshops, but primarily the aim is to support members’ of the organisation to build their systems modelling competencies. As part of this organisational licence agreement, all members of the modelling team in the organisation receive special support through the Online Systems Learning Network, for which an additional subscription fee is not required as this is included in the original license agreement. All the benefits of the individual membership outlined above are available to individuals within a Partner organisation as well as the wider organisational benefits detailed here. Organisational members need to register to the network to be able to use the space as part of their systems learning endeavour.

*If your organisation has a team of two or more who will undertake a major modelling initiative, it is never too late for your organisation to sign up as an organisational partner. Give us a call and we can give you more information about the benefits that you will receive as an organisational partnership member.*
